DBJC house. December 2000.

Dec. 22. 2000 cuando todo el forjado es capitel (TODO CAPITEL)

CUANDO BAILAN LAS COLUMNAS

cuando la columna

cuando el hombre decide insertar la columna, con su base fuste y capitel, el capitel. /.

El capitel es un elemento que sirve para repartir o transmitir las cargas que, soportadas por la columna, se transmiten a través del fuste y finalmente se transmiten a través de la base a la tierra.

Cuando la carga es grande, 2 columnas y una viga.

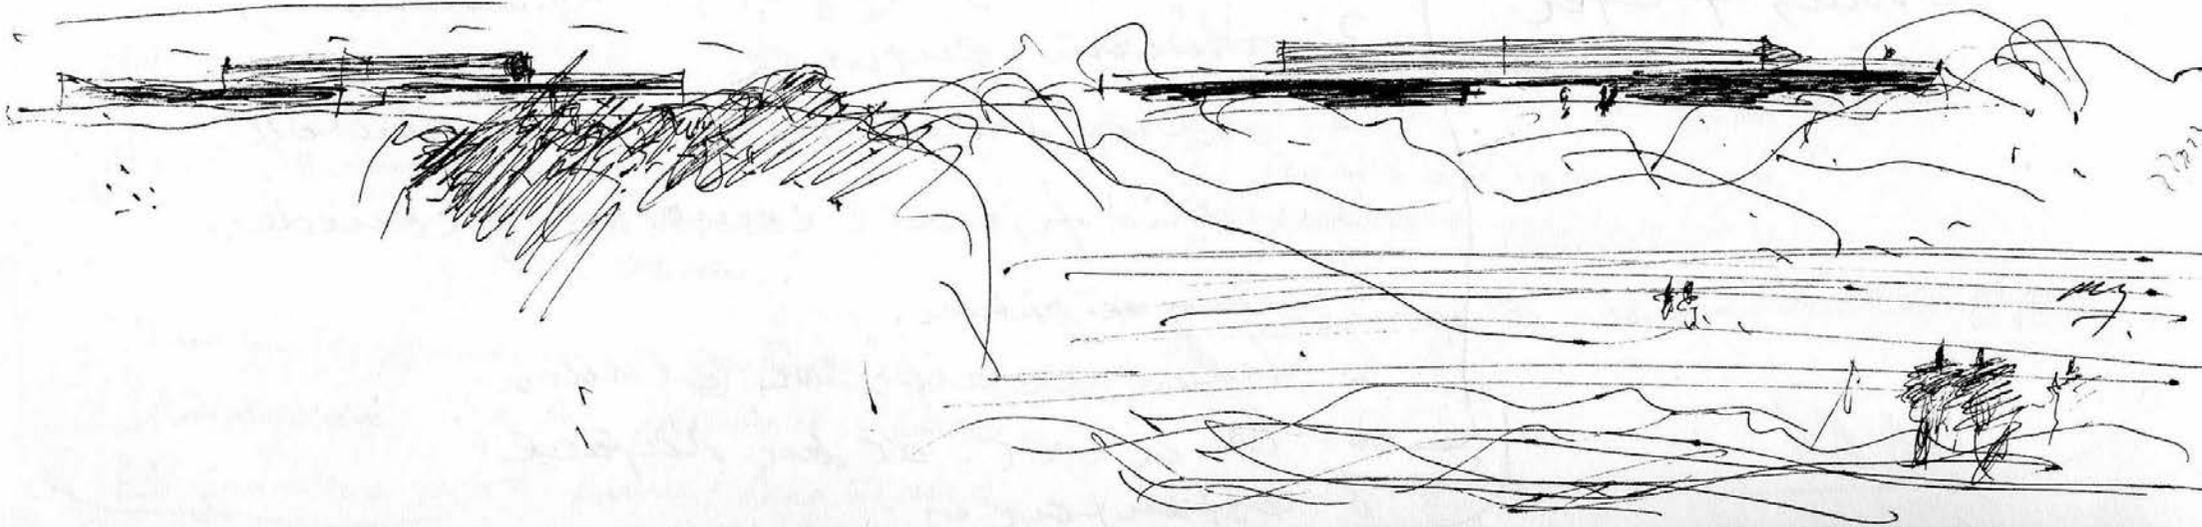

si es mayor, dos vigas y 4 columnas.

Un techo plano se convierte en vigas, 4 columnas y muchos capiteles.

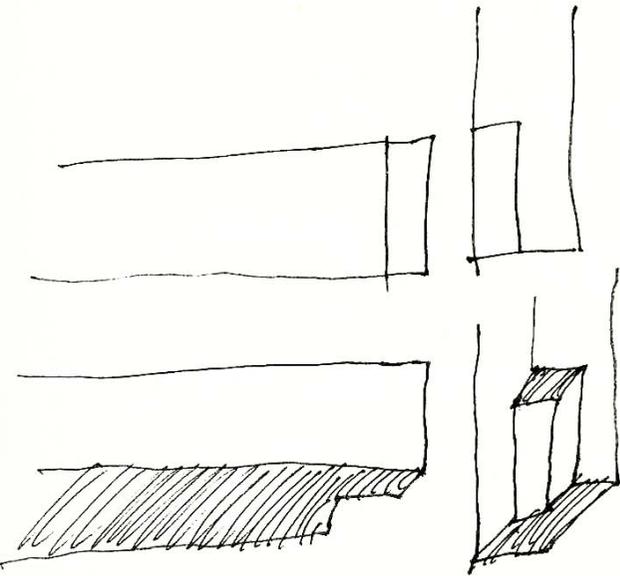

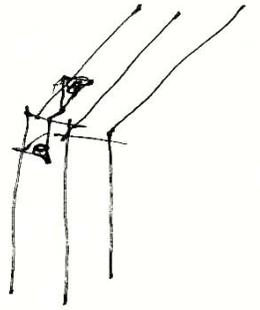

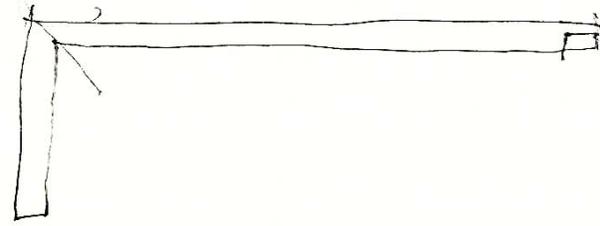

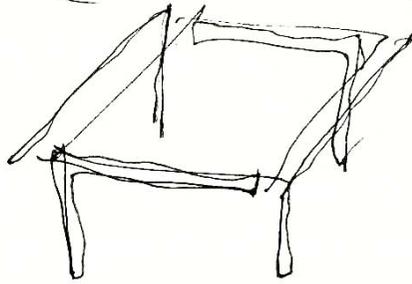

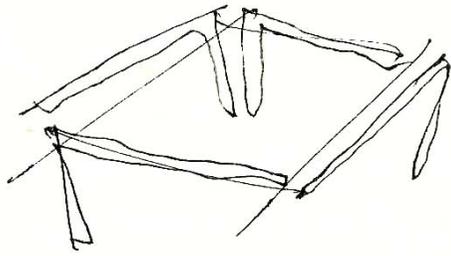

Cuando el forjado, en vez de ser un entramado de vigas, se hace una unidad de vigas y forjado, la LOSA que es continua,

podemos imaginar, y más que imaginar, materializada.

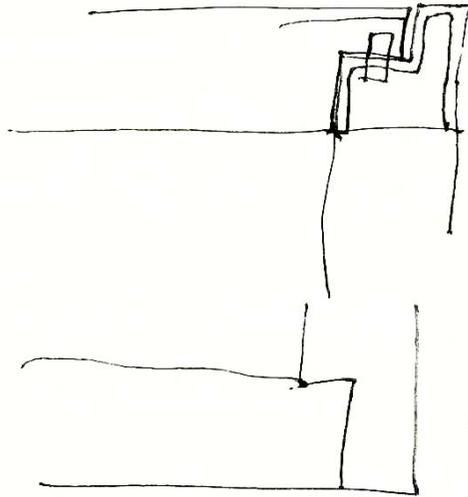

que toda la losa es capitel, todo capitel, y es entonces cuando podemos colocar las columnas en un orden libre, en un orden no necesariamente del tipo en vano, o de las retículas.

- en un principio fue el muro.
  - entre dos muros, con techo, o con forjado
  - luego se abrió el muro que se desintegró en columnas.
  - las columnas se reemplazaron porque el plano horizontal soportado estaba formado por vigas.
  - luego vino el acero. luego el hormigón. luego el hormigón armado. LA LOSA. toda la losa es ya capital.
  - todas las columnas pueden bajar.
- CUANDO BAJAN LAS COLUMNAS.
